

Dear Sir,

I am really enthusiastic and excited about securing an internship in computer science, my core subject. As a fresher, I am looking forward to a significant gap between theory and practice, especially in areas such as machine learning, natural language processing, and allied areas. Some hackathons that I have taken part in have helped me get interested in ML and NLP. I'm eager to know and work on real-world projects and gain hands-on experience and contribute meaningfully to innovative solutions. An internship at your esteemed organization will not only provide me with invaluable practical insights but also further my growth in ML and NLP. I am totally committed to learning and contributing meaningfully to your team. Thanks for considering my application.

During my first year in the profession, I would really want to be engrossed in a continuous process of learning. Indeed, I would want to learn as many things as possible, learn new skills, and get to understand the fundamentals of my field. By the third year, I see myself becoming an expert practitioner. Here, I would be honed and polished in skills and ability to apply what I've learned by the fifth year. At that point, I hope that the experience, skills, and innovative ideas acquired by the first few years of my career will make me contribute significantly to my organization. I would wish to be part of the team, driving innovation and delivering outputs.

I am excited about the opportunity to learn and grow with Hardpoint Consulting. Thank you for considering my application. I look forward to the possibility of contributing to your team.

Sincerely,

Haritha Tony
